AutoCAD is one of the most popular CAD applications, along with other products that are supplied by Autodesk. History [edit] Development [edit] From 1979 to 1980, Bill Gates was the vice president and technical director for the Mac business of Digital Equipment Corporation (DEC). He was responsible for the MacPaint software. When he left Digital to start Microsoft in 1980, he wanted to make a product that was better than MacPaint, but he had no professional experience. He hired a team of about 18 people, including a few he had worked with at the company, to

develop what would become the Macintosh. At DEC, Gates had tried writing an operating system. He wanted to work on a software project for which he had some experience and felt he had some skill. Gates's idea was for an interactive system in which the user could create applications using a "programming" language. It is rumored that the name AutoCAD originated as a combination of Auto, with "A" being for Auto and "CAD" for Computer-Aided Design. This rumor may be incorrect and other possible origins of the word "AutoCAD" include "autocad", "automatic design", "automated design", "autodigit", "autodoc", "autodoor", "automated drawing", "autodriver", and

"autodude". Development of AutoCAD began in 1982. Larry Tesler and Mike Saenz, who had previously worked together on the 1976 I/O Design Process for the Burroughs 1000, were responsible for the original creation of the AutoCAD family of products. Autodesk acquired AutoCAD, AutoCAD LT, and AutoCAD Map 3D in March 1997. Apple Computer acquired a 35% stake in Autodesk in 1996. That same year, Apple and Autodesk introduced AutoCAD 2000. The first version of AutoCAD to use the operating system Microsoft Windows. The Mac version continued to use MacPaint. Until 1995, Autodesk's AutoCAD development team worked from an office in a

suburb of San Francisco known as The Fog Factory. The team had offices in the same building in San Rafael where Intel Corporation had its first assembly facility. In 1995, Intel's parent company, the Intel Corporation, bought a 32% stake in Autodesk. Autodesk employees considered this as a reflection of the company

AutoCAD Product Key Architecture for Mac OS X, one of the first AutoCAD-based applications on Mac OS X. In 2011, Autodesk released AutoCAD Architecture for iPad, a full-featured mobile application for iPad users with access to AutoCAD data.

Autodesk Contour X is a non-AutoCAD based contour line management software. AutoCAD Map 3D is a web-based and remote desktop-based GIS capable of hosting AutoCAD data. In the February 2008 release of AutoCAD 2008, Autodesk announced a new application, AutoCAD Wireframe, designed to provide a better wireframe 3D view, enabling users to view AutoCAD entities as wireframe objects. AutoCAD as a whole is not Free and is more than two decades old. There are many websites on the Internet that provide free access to user manuals and technical support. History AutoCAD's history began in 1962 when Dennis B. Montgomery, a graphic designer and draftsman, was

inspired by the Stanford Research Institute's Sketchpad, developed in 1955. Montgomery authored the first revision of the AutoCAD application in 1967. Montgomery's AutoCAD version 1.0 was developed using Borland's Pascal for the first time, with Borland releasing AutoCAD in 1986. This version of AutoCAD, after years of development, was the first version of AutoCAD that had its own, native file format. AutoCAD was sold in 1989 for \$3,000 (equivalent to \$4,150 in 2015). The version 1.0 release of AutoCAD was one of the first major releases of software, with a sales force that took the product on the road to support customers. AutoCAD had been released as a beta product and support was also

provided to registered beta users. Autodesk was founded in 1986 by the MIT-trained software engineer Ben Shneiderman, who worked for William Gates III to develop Windows 1.0. Shneiderman was an expert in user interface design and he knew that a computer could do anything a human could do. Shneiderman and his wife then made a trip to Paris where they saw a graphic design system with a flowchart interface called HyperStudio. They asked Shneiderman to become the technical director of Autodesk. Ben Shneiderman retired from Autodesk in January 1998 and started a consulting firm ca3bfb1094

Emails, phone records and text messages in the phone records of President Donald Trump's transition team show that members of the presidential team discussed potential locations for Trump's post-inauguration trip to Trump Tower, according to the Associated Press. The conversations centered around the security needs for Trump's wife, Melania Trump, and her parents,

Viktor and Amalija Knavs. The reported conversations have been described as "bizarre and paranoid" by some members of Trump's team, and some say they show that the president's team was "scared to death" about what the incoming administration would discover as soon as they took office. "It showed that there was concern the New York City Police Department would find out about the plans and that they couldn't prevent that," said a source who worked for one of the transition team members. Those around Trump took the planning for Trump's trip to New York very seriously, taking into account security concerns for Trump's family. [Related: More 'bizarre' Trump transition emails

"This is a very unusual process," said Ronald Klain, a senior aide to Vice President Joe Biden, who ran the Democratic National Convention. "It seems clear that Trump's team was concerned about the prospect of what would become known before Trump's inauguration about the meeting between him and President Putin. We have, in our political campaigns, had people contemplating what if? What if the opponent's phone records were examined? What if they were subpoenaed? What if they took their computers? And they're in

a position where they can't prevent those things from happening." One member of the transition team used a company account to search for information on Trump's family and their life in the area. "A lot of people were searching records of Trump's life," said the source. "Did they know the type of search they were performing? Were they looking for the address? What was their motive? Why were they looking for this information?" The source added, "In the past, there
